

 *your gift to Plants-4-Hunger feeds children and families in need*

PLANT-BASED SCHOOL MEALS

Through our partners at **Magic Marble** and **Haiti Mama**, we strengthen plant-based school meals for children in need in Nepal, Uganda, and Haiti. Malnutrition and hunger significantly inhibit a child's ability to learn. In communities with high rates of childhood undernutrition, school feeding programs often provide children with their only full meal of the day, supplying crucial nutrition and sustenance, along with increased school attendance and improved learning outcomes.

NUT AND FRUIT TREES

Through our partners at **The Fruit Tree Planting Foundation**, we reforest villages in the Amazon rainforest with native food trees. We prioritize nut trees for their protein. We also support school food forest projects in more than 35 schools across Kenya through the **Green Generation Initiative**. Food trees address the triple crises of global hunger, climate change, and biodiversity loss by providing food and income, carbon sequestration, and wildlife habitat.

COMMUNITY FOOD GARDENS

Through our partners at **Awali Veganic Resource Center**, we empower veganic farmers and food justice activists to improve their nutrition and food security by planting backyard and community food gardens in urban food deserts. They also provide low-cost food to school lunch programs and run a summer camp to teach plant-based farming skills to young people. They collaborate with local officials to install organic micro-farms on unused land in underserved neighborhoods.

BEANS AND SEEDS

Through our partners at **Seed Programs International**, we provide organic beans and growing expertise to food insecure communities around the world through our joint **Planetary Pulse Project**. SPI's seed donation programs also expand food gardens in schools, orphanages, hospitals, refugee camps, and Native American reservations. We also support **Plenty International's** Soy Nutrition Program, which distributes soymilk and soyfoods to more than 300 children and families who live in and around the Guatemala City Landfill.
